MEMORANDUM FOR : Director, Office of Space Systems, USAF
SUBJECT : Pentagon-Langley Communication Link
REFERENCE : Memorandum from Director/OSS to DDB/CIA, Dated 24 April 1962 [REDACTED] 0587-62)

25X1A2g

1. It is wholeheartedly agreed that the new Pentagon-Langley link should be employed to the greatest extent possible to effectuate secure communications between the Washington offices of Dr. Charyk and Dr. Scoville. Certainly, within this concept it should be employed for all official expeditious classified communications between these points on matters of mutual interest and concern under the NRP.

2. With regard to the kind of traffic outlined in your memorandum of 24 April 1962, my Security people have expressed concern that certain categories might be misinterpreted as to scope and, as a result, inadvertently messages might be dispatched to certain stations on the link not authorized to receive same (e.g., stations approved only for information on a certain project should under no circumstances be INFO or ACTION on a message pertaining to other projects).

3. I would suggest that a representative of your office confer with the Chief, Security Branch, IFD, to ensure that we do not breach security in the procedures we implement. Of course, this link should be immediately used for communications between our mutual offices and those of SAFUS, DCI, and DDB/CIA.

25X1A9a 4. I have informed [REDACTED] to expect a call from Lt. Col. Howard or another member of your staff in this regard.
